

front
Accordingly, there is a need for a method and apparatus that provide for increased ease and convenience in managing a user's Internet communications, while at the same time ensuring the user's privacy and minimizing unsolicited email communications with the user. --

A2
Please replace the paragraph beginning at **page 3, line 3** with the following rewritten paragraph:

-- Methods and apparatus according to embodiments of the invention provide for accessing web sites on which the user has an account and providing notification of changes at the site. Embodiments also enable information to be collected, organized, presented and forwarded, such as change or status information corresponding to one or more of a user's accounts. Electronic mail management embodiments are also provided, enabling email to be collected and forwarded from a central site to other email addresses, or enabling the user to view the email at the central site. A user may, for example, assign individual email addresses to any number of uses, such as an individual email address for use in communicating with a particular commercial web site. Embodiments further enable such information handling to be conducted automatically. --

(B)
Please replace the specification section title beginning at **page 6, line 1** with the following rewritten specification section title:

-- Detailed Description --

IN THE CLAIMS:

Please amend *EXISTING* claim 1 to recite the following.

1. (Once amended) A method, comprising:

(B)
generating a unique email address when registering with each of [the] multiple web sites;
receiving emails from the multiple web sites at an email control center;
